

Do you currently have questions about the integrity of your backups and security of your data in your organization?

Hi, I'm Bryan Bechtoldt chief technology officer with SVA Consulting and I'm here today to talk to you about SVA Backup Plus. SVA Backup Plus is a service that we've added into our portfolio that utilizes cloud-based technologies to store your information from your critical business systems off in the cloud. There are many advantages of doing this, most of all is peace of mind. What we're gonna do is we're gonna take your information that may currently be loaded on things like backup tapes, and we're gonna get it out of your facility. We're gonna get it out of your employees hands, and we're gonna put it in a safe place in the cloud. That data can then be used if in fact you get into a situation like a disaster or maybe you lose all your data, or maybe someone does something to your systems that's malicious. We'll be able to grab a fresh copy from the cloud, bring it down, restore your systems and get you back up and running in no time.
