

# AI Diagnostic

Turning AI interest into *Measurable Results*.<sup>®</sup>

## Why should I take the AI Diagnostic?

Many organizations see clear potential in AI, but struggle to determine where to start, what will deliver real value, and how to move forward without unnecessary risk. Investing too early can lead to fragmented pilots and limited impact. Waiting too long can mean missed opportunities. *The AI Diagnostic is designed to create clarity before commitment.*

## What is the AI Diagnostic?

The AI Diagnostic is a focused engagement that includes a short pre-interview and a structured 90-minute working session with key stakeholders to surface the most relevant AI opportunities, assess readiness and feasibility, and align on a clear path forward. The purpose of the diagnostic is to help you decide where to focus first and whether now is the right time to act. It is not a full AI strategy or a solution build, although those are possible next steps depending on our findings.

### WHAT YOU CAN EXPECT AFTER PARTICIPATING

#### Within 24–48 hours of the working session, you will receive:

- Prioritized AI opportunities based on impact and feasibility
- A recommendation for the best next steps aligned to an SVA AI Enablement offering
- A proposed pilot or engagement outline, including objectives, timeline & investment

Decisions are grounded in evidence and business context, not experimentation alone.

## How the engagement works

### 01 Pre-interview survey

10–15 MINUTES, OFFLINE

You provide brief input on current challenges, affected teams, and existing systems to establish context.

### 02 Working session

90 MINUTES

We facilitate a structured discussion focused on validating priorities, sizing potential impact, and understanding feasibility. No solutions are designed during this session.

### 03 Synthesis & recommendation

24-48 HOURS

Our team synthesizes findings and delivers a clear recommendation and proposed next steps.

## Ideal for organizations that ...

See AI potential but lack clarity on where to focus

Want to avoid fragmented or low-impact pilots

Need alignment on how AI can support business priorities

**Ready to get started?**  
**Make it easier**  
**with SVA** →

The AI Diagnostic helps you make a confident, informed decision about how to move forward with AI, from launching a focused pilot to addressing readiness gaps, and sets the stage for turning AI into action with measurable results.
